Cornell Assistive Technologies

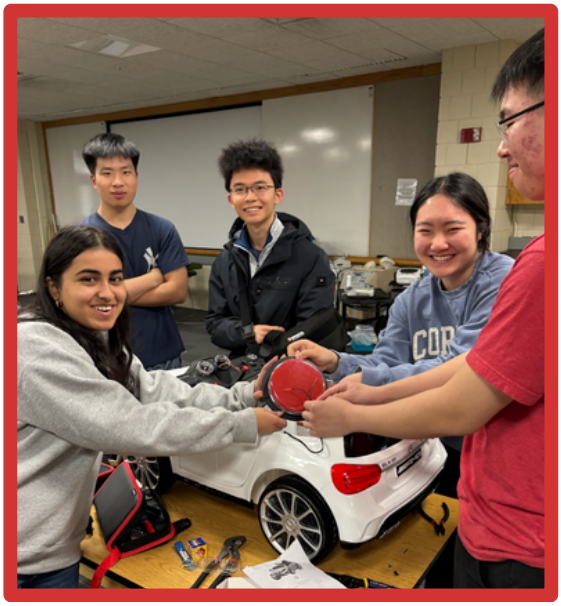

Project Team

Sponsorship Packet

About Us

Cornell Assistive Technologies is a project team dedicated to helping people with disabilities by developing assistive technologies. We also work to raise awareness and educate the Ithaca community about disabilities and accessibility.

Subteams

Cornell Assistive Technologies is a project team dedicated to helping people with disabilities by developing assistive technologies. We also work to raise awareness and educate the Ithaca community about disabilities and accessibility.

Engineering:
Works with community partners to design and build assistive technology based on real accessibility needs.

Education & Advocacy:
Promotes disability awareness, accessibility, and inclusion. Engages with the Cornell and Ithaca communities through outreach and education.

Business:
Works behind the scenes to keep CAT's projects and events running, while growing the team's funding, partnerships, and presence on campus.

Achievements

- Received over $4,000 in funding from MIT Media Lab to support development of Tactile Coding Blocks
- Tactile Coding Blocks Project placed 2nd at the 2026 RESNA Student Design Challenge
- Successfully hosted our 4th annual GoBabyGo event in collaboration with Ithaca College Occupational Therapists

What CAT Offers

Cornell Assistive Technologies offers **community access** through community-driven initiatives while also providing **direct connections** to the talented individuals who make up our organization.

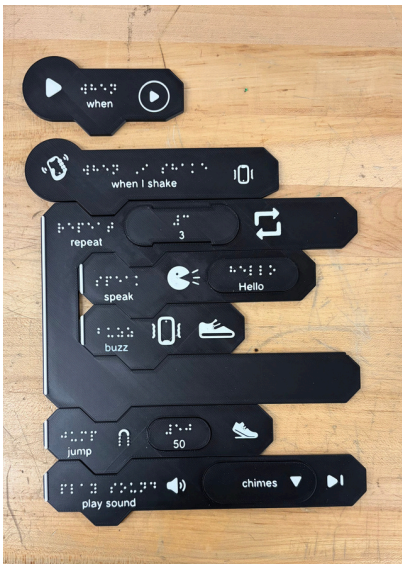

CAT is committed to supporting not only the **Cornell community**, but also our **greater Ithaca community**. Through **partnerships** with GST BOCES, Ithaca Science Center, and Cayuga Heights Elementary School, we have extended the reach of our advocacy efforts.

Furthermore, our members come from **diverse** academic backgrounds and professional interests, and each has a **unique skill set** that CAT has been able to leverage.

Our Projects

Tactical Coding Blocks

Low-cost, 3D-printed tactile coding tools with Braille and high-contrast features for blind and low-vision learners

Smart Wheelchair

A mobility platform exploring accessible control methods, including eye tracking, keyboard, WiFi, EEG, and EMG-based interfaces

Urinary Drainage Bag Clamp

A leak-resistant, Bluetooth-controlled clamp developed for a community partner and sent out for use

Sensory Music Touchpad

A lap-sized touchpad that translates music into vibration patterns, allowing people with hearing impairments to physically experience different rhythms and sounds

Toy Adapting

Switch-accessible toys created through hands-on adapting sessions with students, educators, and partner organizations

Sponsorship Tiers

Support Tier ($500 - $1,000)

- Access to Resume Book
- CAT's promotion in media

Advocate Tier ($1,000 - $2,500)

- Opportunity to host an event with us
- Free merchandise
- Feature sponsor in GoBabyGo and other events

Advocate Tier ($2,500 - $3,500+)

- Opportunity to directly work with us on a project, or have members work on their projects
